NCCC
2015 CONFERENCE
Norwood, MA • April 27-29

We are thrilled to announce that Microsoft Corporation will once again be supporting our upcoming annual conference in April! A full schedule of Microsoft presentations include the following topics:

- Cloud Computing in Law Enforcement: The CJIS cloud is here!
- Intelligence Led and Predictive Policing
- Managing police video for criminal investigations and public records request
- Data-driven policing – Leveraging Social Media to fight crime
- Technical Support Scams: The New Chapter in Cybercrime
- A demo of PhotoDNA and an Introduction to Project Vic

These sessions help to make the 2015 NCCC conference a must-attend event!

A number of this year's Microsoft sessions will be led by Microsoft's Justice and Public Safety Solutions Team. The JPS team mission is to provide technology solutions for law enforcement and first responders in State and local government agencies. Working with a diverse eco-system of partners, and Microsoft's CJIS capable government cloud, they deliver solutions in areas of: cybercrime, police video, crime prevention, criminal investigations, and emergency management.

We are also pleased to welcome Rob McKenna, former Attorney General of Washington, who will be presenting on Tuesday morning during the Microsoft Session on Technical Support Scams. As many of you are aware, Mr. McKenna was an active member of the National Association of Attorneys General (NAAG) during his first term, co-chairing both the Financial Practices Committee and the Tobacco Committee. He was elected President of the NAAG by his peers and honored as America's "Outstanding Attorney General" in 2011. Mr. McKenna is now a partner in the global law firm of Orrick, Herrington & Sutcliffe, where he co-chairs the Public Policy Group, works with its Appellate Practice Group, and represents clients such as Microsoft, T-Mobile and DISH Network.

In addition to the offered sessions, Microsoft Digital Crimes Unit (DCU) professionals will also be on hand to showcase the Digital Crimes Community Portal and share details about the Microsoft Cybercrime Center, a 16,800-square-foot crime-fighting headquarters that uniquely combines legal and technical expertise with cutting-edge tools and technology. Through cooperative efforts with customers, industry, academic, and criminal law enforcement organizations, and other industry

partners, the DCU aims to utilize the Microsoft Cybercrime Center to protect consumers online and help make the Internet safer. You can learn more about the launch of the Microsoft Cybercrime Center at http://www.microsoft.com/news/stories/cybercrime.
