Subject: Fortress Exchange

Good Morning

Sometime soon when you get a chance and you have notified everyone, please do one of the following:

- Reboot the Fusion Exchange server, or
- Dismount and Remount the mailbox database (DB1).

I made a setting change last week to put the system into Circular Logging. The reason I did that was because there is currently no Exchange-Aware backup being performed on the server. Exchange uses transaction files to log all changes to the database. It logs it first to a transaction file and then when time Exchange updates the database. The transaction files are usually removed as part of the backup process. With no backup the server would eventually fill up with old transaction files. There is a property setting on the database that avoids this problem, it is called circular logging. When set, Exchange will delete the transaction files when it is finished updating the database.

I made the setting change but it will not take effect until one of the upper two actions are done.

Please contact me if you have any questions.
